DETAILED ACTION

Election/Restrictions

Claims 9-16 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 5/9/05.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jensen et al in view of Brar et al. Jensen et al discloses the basic apparatus including the use of a food processing component formed of nickel plated aluminum. There is no mention of a dense outer surface formed by tumbling which may decrease the component life. Brar et al solves this problem by disclosing similar apparatus including the use of an aluminum component that has been tumbled to produce a desired outer surface. In order to produce the desired outer surface, it would have been obvious for one of ordinary skill in the art to modify Jensen et al by tumbling the aluminum component to produce a desired outer surface, taught to be desirable by Brar et al. The exact dimension of the coating would depend on several factors such as desired component life.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) in view of Jensen et al and Brar et al. APA is the apparatus and its problems discussed in the first few pages of the specification. The problems include component surfaces that are not properly treated and end up contaminating the food. The combination of Jensen et al and Brar et al as set forth above solve these problems by disclosing the use of nickel plated aluminum in similar apparatus. In order to prevent material contamination, it would have been obvious for one of ordinary skill in the art to modify APA by using nickel plated aluminum components, taught to be desirable by the combination of Jensen et al and Brar et al. the remaining limitations would then have been obvious design choices only e.g. the exact dimension of the coating would depend on several factors such as desired component life.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
